Beginner to Guru

JUnit Dependency Injection

## Parameter Resolver

- JUnit 5 Defines a Parameter Resolver API to resolve parameters at runtime
- Allows JUnit to inject parameters into test methods
- While extensible, there are 3 built in resolvers:
  - **TestInfo** - Provides information about the test name, method, test class, test tags
  - **RepetitionInfo** - Provides Information about the test repetition
  - **TestReporter** - Allows you to publish runtime information for test reporting
